

# Rockfon **Eclipse**<sup>®</sup> Islands

**WHERE DO ACOUSTIC  
SOLUTIONS MEET  
UNLIMITED CREATIVITY?**

Anywhere, thanks to Rockfon Eclipse islands,  
now available in any colour and any shape.

## Any **shape,** any **colour**

Rockfon Eclipse is the ideal solution for bringing a new aesthetic dimension to any space while improving acoustics – all at the same time. The sky is the limit, as the versatile range of stone wool islands now come in a variety of custom shapes and are available in any colour.

Combining design and acoustic performance, Rockfon Eclipse is suited to a wide range of applications, from offices to education, restaurants to retail or leisure. The flexible installation possibilities and wide selection of shapes and colours are every designer's dream.

# Shapes and sizes

*An unbeatable selection*

Rockfon Eclipse islands are available in squares, rectangles, circles, standard geometric shapes and custom formats for total design freedom. Hung from thin wires they appear to float in mid-air, adding a distinctive visual appeal to any room. They can be positioned in any arrangement, at any height, even directly mounted and at different angles.

Rectangular islands are also available in a larger format (2360 x 1160mm), reinforced with two special aluminium profiles on the reverse for extra strength. With so many sizes and shapes, Rockfon Eclipse adapts effortlessly to any interior design.

## Get **creative** with **colours**

Rockfon Eclipse is available in white and in an unlimited number of custom colours. Each island is made of a 40mm-thick stone wool panel. The visible side is covered with a painted glass fleece that creates a smooth surface. The rear side can be ordered in the same colour as the front side, or in white to enhance light reflection.

Custom colours are specified using the Natural Color System® (NCS) and are available with a minimum order of just one box. To make sure the custom colour is a perfect match, you will receive a sample swatch for approval before production begins.

## A flexible fit for any application

Quick and easy to install, Rockfon Eclipse is a competitive and versatile island solution. It can be hung from different kinds of structures (concrete, wood, steel) using the Rockfon spiral anchors and the Rockfon Eclipse suspension system. It is ideal for thermal mass buildings as it lets the air flow freely in the room.

For new builds, Rockfon Eclipse islands are well suited to spaces where suspended ceilings cannot be installed, where the acoustics are particularly challenging, or the design calls for a ceiling that is out of the ordinary. They can also be used to enhance the acoustics of existing or historic buildings, making them the ideal choice for refurbishment projects.

## All the benefits of **Rockfon** stone wool

Just like other Rockfon stone wool solutions, Rockfon Eclipse offers the highest performance in sound absorption as both sides of the islands absorb sound and contribute to reducing reverberation time and ambient sound levels. They are the perfect choice for buildings that feature materials such as glass and concrete.

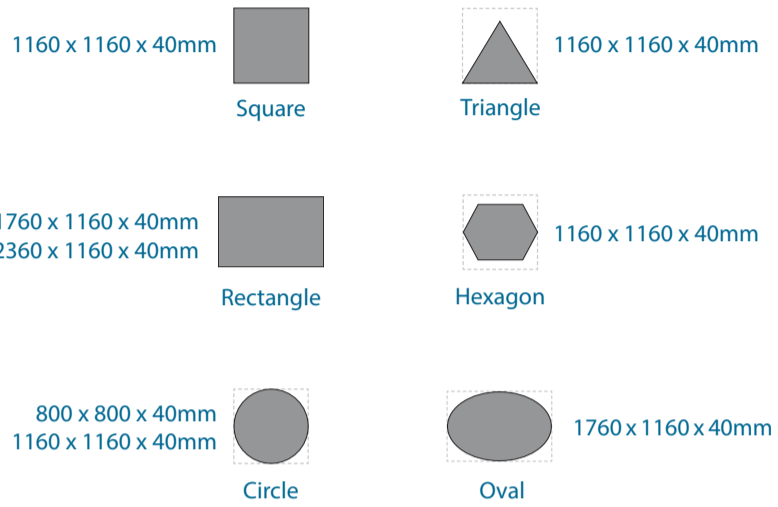

Because Rockfon Eclipse is made of stone wool, it also offers excellent performance in terms of fire safety and humidity resistance. Benefitting from the structural stability and easy maintenance of stone wool, the longevity of Rockfon Eclipse offers building owners long-lasting peace of mind.

# ASSORTMENT

## Shapes & Dimensions

### Standard Shapes

### Custom Shapes

# COLOURS

Rockfon Eclipse tiles are available in the colour of your choice—and in any quantity. Just provide us with the NCS reference and we will do the rest.
